

ALMONER

SYSTEM DESIGN PRACTICE

HEALTH AND HUMAN SERVICES

00 / SUMMARY

Data systems and product implementation for coordinated care: interoperability, data models and reporting infrastructure for health and human services programs.

01 / PRACTICE

- Interoperability architecture | HL7 FHIR, HMIS, RDF/OWL
- Semantic data modeling, ontologies, and API specifications
- HMIS data quality, compliance and reporting
- Data warehouse, ETL, and software engineering
- Data standards and governance alignment
- Capability building and technical assistance

02 / FOCUS

- Homeless response and housing systems
- Care coordination across health and social services
- State and county HHS programs
- Managed care plan and health systems integration
- Continuum of Care data infrastructure

03 / RECORD

- Over 8 years in housing and social services
- Statewide HMIS data quality analysis across 40+ CoCs | ICF
- HMIS interoperability API specification | ICF
- Contributor, W3C Community Group | Unified Care Model
